Mineral Properties

1. Extra High Property

As at January 1, 2008 the Company held a 66% interest in the Extra High Property, with the remaining 34% interest being held by Colt Resources Inc. (“Colt”), a company that was formerly related by certain common directors and officers. The property is subject to a 1.5% net smelter returns royalty (“NSR”), 50% of which, or 0.75%, can be purchased at any time by paying \$500,000 to the NSR holder.

On January 21, 2008, the Company entered into an option agreement with Colt whereby Colt was granted the right and option to acquire, in two separate equal tranches, the Company’s 66% undivided interest in the Extra High Property. Pursuant to the 2008 Option Agreement, Colt exercised the first tranche of the option by making a cash payment of \$250,000 to the Company thus acquiring from the Company a 33% undivided interest in the Extra High Property. As a result of exercising the first tranche of the option, Colt increased its undivided interest in the Extra High Property to 67% and has become the operator of the Extra High Property.

In order to exercise the second tranche of the option, Colt was required to make a cash payment of \$250,000 to the Company on or before December 31, 2008. Colt did not exercise the second tranche of the option. Consequently, Colt now holds a 67% undivided interest in the Extra High Property and the Company now holds a 33% undivided interest in the Extra High Property. Pursuant to the Joint Venture which the Company and Colt have formed, each party shall henceforth contribute its proportionate share of property related expenditures. If any party fails to contribute its share of future property related expenditures, then its interest will be diluted on a straight-line basis. If any party’s interest is diluted to less than 10%, then that party’s interest in the Extra High Property will be converted into a 0.5% net smelter returns royalty.

As at the date of this MD&A, the Company holds a 33% undivided interest in the Extra High Property.

Risks related to our Business

The Company, and the securities of the Company, should be considered a highly speculative investment. The following risk factors should be given special consideration when evaluating an investment in any of the Company’s securities.

Although during Q4 of 2014 the Company started generating a minimal revenue of \$4,157, however the Company does not anticipate to generate any revenue in the foreseeable future. In the event that the Company generates any revenues in the future, then the Company intends to retain its earnings in order to finance growth. Furthermore, the Company has not paid any dividends in the past and does not expect to pay any dividends in the future.

There are a number of outstanding securities and agreements pursuant to which common shares of the Company may be issued in the future. This will result in further dilution to the Company’s shareholders.

Governmental regulations, including those regulations governing the protection of the environment, taxes, labour standards, occupational health, waste disposal, mine safety and other matters, could have an adverse impact on the Company.

Trading in the common shares of the Company may be halted or suspended or may be subject to cease trade orders at any time and for any reason, including the failure by the Company to submit documents to the Regulatory Authorities within the required time periods.

The exploration of mineral properties involves significant risks which even experience, knowledge and careful evaluation may not be able to avoid. The prices of metals have fluctuated widely, particularly in recent years as it is affected by numerous factors which are beyond the Company’s control including international, economic and political trends, expectations of inflation or deflation, currency exchange fluctuations, interest rate fluctuations, global or regional consumptive patterns, speculative activities and increased production due to new extraction methods. The effect of these factors on the price of metals, and therefore the economic viability of the Company’s interests in mineral exploration properties cannot be accurately predicted. Furthermore, changing conditions in the financial markets, and Canadian Income Tax legislation may have a direct adverse impact on the Company’s ability to raise funds for its interests in mineral exploration properties. A drop in the availability of equity financings will likely impede spending on mineral properties. As

a result of all these significant risks, it is quite possible that the Company may lose all its investments in the Company’s interests in mineral properties.

In respect to the Company’s investment in the Mexican gaming company, as there are no assurances whatsoever that in the foreseeable future the Company shall receive any casino royalty revenues from the Mexican land based casino, for the year ended December 31, 2014 the Company has recorded impairment of \$799,999 in regards to the Company’s investment in the Mexican gaming company.

In order to meet this requirement, the Company intends to seek equity and/or debt financings through private placements and/or public offerings and/or loans. In the past, the Company has been successful in securing equity and debt financings in order to conduct its operations uninterruptedly. While the Company does not give any assurances whatsoever that in the future it will continue being successful in securing equity and/or debt financings in order to conduct its operations uninterruptedly, it is the Company’s intention to pursue these methods for future funding of the Company.

On July 23, 2013, the Company closed the fifth tranche of the convertible debenture financing with an arm’s length party for the principal amount of \$50,000. This note presents information about the Company's exposure to each of the above risks, the Company's objectives, policies and processes for measuring and managing risk, and the Company's management of capital. The Company employs risk management strategies and policies to ensure that any exposure to risk is in compliance with the Company's business objectives and risk tolerance levels. While the

(b) Fair value of financial instruments

The fair values of cash, accounts payable and accrued liabilities, convertible debentures and due to related parties approximate their carrying values due to the short-term maturity of these instruments.

Fair value hierarchy

IFRS 7 Financial Instruments: Disclosures requires classification of fair value measurements using a fair value hierarchy that reflects the significance of inputs used in making the measurements. The levels of the fair value hierarchy are defined as follows:

Level 1: Quoted prices (unadjusted) in active markets for identical assets or liabilities

The financial instruments that potentially subject the Company to a significant concentration of credit risk consist of cash. The Company mitigates its exposure to credit loss associated with cash by placing its cash with a major financial institution.

(d) Liquidity risk

Liquidity risk is the risk that the Company will not be able to meet its financial obligations as they are due. The Company's approach to managing liquidity is to ensure that it will have sufficient liquidity to meet its liabilities when due.

At March 31, 2015, the Company had cash of \$7,816 (March 31, 2014 - \$2,327) available to apply against short-term business requirements and current liabilities of \$583,304 (March 31, 2014 - \$374,327). All of the current liabilities, except for convertible debentures, are due within 90 days of March 31, 2015. Amounts due to related parties are due on demand.

As of the date of this MD&A, a convertible debenture with a face value of \$50,000 has matured and is payable on demand together with accrued interest.

(e) Market risk

Market risk is the risk that changes in market prices, such as interest rates and foreign exchange rates, will affect the Company's net earnings or the value of financial instruments. As at March 31, 2015, the Company is not exposed to significant interest rate risk, currency risk or other price risk on its financial assets and liabilities due to the short term maturity of its financial liabilities and fixed interest rate on the convertible debentures.
